

CapShot: the on-demand IT Capacity Service

The ultimate
solution for
managing
IT utilization

capshotSM 
Capacity Summary Service

CapShotSM delivers

the information you need to make IT Decisions

CapShotSM gives you valuable insight into your system's performance including processor utilization, disk, I/O, memory and metering usage.

The sample graph shows the raw information captured during the CapShotSM process. This data and other system utilization information are consolidated and used to create a report outlining the current state of your mainframe environment and resource utilization.

The diversity and growing volume of IT-related data present huge challenges for most Enterprise Systems. Harnessing the information to make well-informed decisions is a daunting task. You need a clear view of the impact on your system's behavior from increased customer and internal user demands, government regulations and new business initiatives.

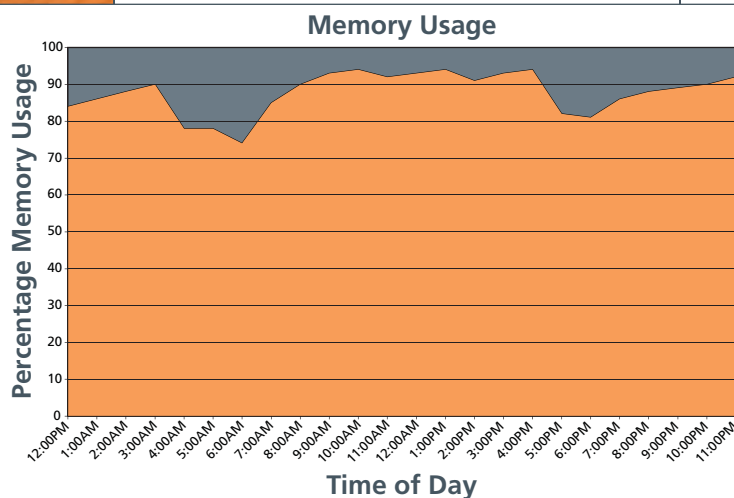

- How your systems perform during peak periods
- How you can optimize processing power and continue to reduce costs
- Whether your current systems can handle future growth
- Whether your system utilization meets your compliance requirements
- What tools are available to verify your current system utilization

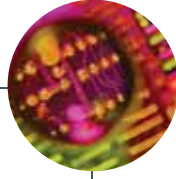

A Unique Solution

G Force Global Technologies can help you overcome your IT challenges with CapShotSM, an on demand IT capacity service that captures, analyzes and reports on the heartbeat of your IT Infrastructure. CapShotSM gives you valuable insight into your system's performance including processor utilization, disk, I/O, memory and metering usage.

Historical analysis provides the proper business perspective for

IT decisions. Real-time analysis ensures your ability to identify current performance issues. Trending analysis provides recognition of normal and abnormal usage, revealing the impact of changes on your business — *valuable knowledge that can help you deliver the right level of service to your organization.*

A New Approach to Performance Information

In the past, you likely engaged an IT consultant to perform a specific capacity study. The consultant would spend several weeks capturing system information, and would then prepare a comprehensive report with analysis and recommendations. The process could be lengthy, expensive and disruptive. Not only that, but gathering trending analysis over time required additional engagements.

Our CapShotSM Service sends traditional approaches to the recycle bin. Consider these features and benefits:

- On-demand service puts you in control
- Embraces Software-as-a-Service (SaaS) model which provides comprehensive analysis tools through a services environment
- Access reports via secure website
- Multiple scans to allow trending
- No on-site time required
- No disruption to current environment
- Requires no customer resources
- No software license fees
- Low cost annual subscription service

With CapShotSM, you get the best of all worlds. A solution that drives high value at a low cost along with a low internal resource investment. You maintain complete control over the process including Web access, Scan Scheduling, Data and Reports. You schedule the day, time and duration and the CapShotSM Service notifies you when your reports are ready to view.

Key CapShotSM Service Activities

- Gather data for specific period and duration of time
- Collect and analyze data
- Perform capacity modeling
- Provide reports showing problem areas and performance issues

The results from using the CapShotSM Services enable you to recommend ways of improving systems performance to help meet your end users service levels. The information provides a valued resource when planning for your next technology acquisition. The real benefit of this solution is the high value of the information at an extremely low price.

CapShotSM online reports give you the information you need to maximize your systems.

About G Force Global Technologies

G Force offers comprehensive solutions to help you support key industry and corporate initiatives. These include infrastructure optimization and technology migrations, particularly to Windows, open source and compliance frameworks. We help you meet the challenge of improving IT resource utilization through our solutions-oriented approach, building each unique solution on the foundation of our technology and services offerings.

What sets us apart is the way we connect with our clients.
