Present

AB Suite Jump Start – An Educational Workshop

Dates to be announced

Check the G Force Global Technologies website for current announcements

If you are currently utilizing EAE and you are considering a move to AB Suite, these questions may already be running through your organization.

“Is AB Suite just another upgrade to EAE?”

“What options become available to us if we move to AB Suite?”

- *“What “industry standard” tools become available to us if we implement AB Suite?”*
- *“What kind of training is required for my developers and operations staff?”*
- *“What is the effort to get my current EAE applications to AB Suite?”*

Do these questions sound familiar? If so, you can't afford to miss this AB Suite “Jumpstart Workshop”.

How can this workshop help?

G Force Global Technologies*, would like to invite you to participate in this unique opportunity to explore and discuss the implementation of AB Suite with the experts in Enterprise Application Environment (EAE/LINC) - all in a 2 day workshop designed to help you to understand the new AB Suite environment and development process.

This seminar will bring together EAE/LINC customers and G Force experts to present and discuss the new advances in this development technology. This event will also provide a forum to share your experiences with the other attendees and the experts. After attending this workshop, you will be able to understand the options available to your organization for implementing AB Suite and the industry standard development tools that will work in conjunction with this product. This includes understanding your choices and the effort required to apply these tools to your environment. We will also discuss in detail the required training and migration effort to implement AB Suite and to educate your development and operations staff on the use of these tools.

*G Force Global Technologies is a premier provider of EAE and AB Suite Services and has expertise on upgrading host based systems, implementing EAE and AB Suite on MCP, 2200, Windows and UNIX Environments.

Who should attend?

Software Developers or Software Development Managers of EAE user organizations. MCP, 2200, Windows and UNIX users can attend this training session.

ASK YOURSELF:

Ask yourself the following questions:

- Are you a current EAE user that needs to upgrade to AB Suite?
- Do you want to modernize your EAE applications?
- Do you want to interface new industry standard development tools into your environment?
- Are you considering a migration away from your Unisys MCP environment?
- Are you currently running an unsupported release of LINC or EAE?

If you answer “YES” to any of the questions above, you should seriously consider attending this AB Suite training class.

There are numerous benefits to be derived by moving to AB Suite. AB Suite is a totally new environment that will replace EAE and LINC. A move to this product is not a “weekend upgrade”. There are significant enhancements and differences in AB Suite that will require training and update sessions for the clients that choose to move forward with AB Suite. The “AB Suite Jumpstart Workshop” is meant to provide an *overview* of this product to our clients. This workshop will NOT provide all of the training required to implement AB Suite in your environment.

WHERE AND WHEN.

In 2008, G Force Global Technologies in conjunction with Unisys will be offering a series of 2-day AB Suite workshops around the country to help EAE users understand the impact and effort of moving to AB Suite. The success experienced from our first three workshops has verified the necessity of such sessions. We will be offering additional workshops at other locations throughout North America in 2008. The date and locations of those workshops will be announced.

Seating is limited for this event to the first 20 people that register.

Please register for this event by calling 480-596-0708 or E-Mail absuite@gforceglobal.com
