

G Force Compliance Solution

G Force Global Technologies and partners ensure compliance success. With its consulting expertise and combined solutions from Unisys, EMC and Verifichi, G Force Global Technologies helps organizations develop a roadmap to compliance.

A ROADMAP TO COMPLIANCE.

In recent years, the growing number of government regulations has caused organizations to dedicate considerable resources and energy to implementing new compliance initiatives. Regulations such as the Gramm-Leach-Bliley Act and Sarbanes-Oxley Act impact all areas of the organization—from the boardroom to the data center. And they affect a wide variety of companies, including publicly-traded, private and those in the public sector. For many, compliance is an ongoing challenge.

Whether it's adhering to the financial reporting mandates of Sarbanes-Oxley, establishing corporate governance and related policies or meeting software licensing requirements, IT is finding itself on the front lines of compliance. Compliance has created more work, more complexity and more cost—and companies are looking at technology to help minimize the resources needed to meet these new requirements.

Thrust into the compliance spotlight, today's IT management is asking:

- How will recent legislation affect my responsibilities as an IT manager?
- How can I track licensed software and contract compliance?
- What tools are available to assist with e-mail and instant message (IM) retention?
- What types of data security and segregation of duties are required?
- What tools are available to verify the components of my IT infrastructure?

G Force Global Technologies, Inc. can provide the answers. In partnership with Unisys, EMC and Verifichi, G Force provides IT organizations with tools, processes and solutions to assist them with their compliance efforts.

Reduce risk.

If a company is regulated under Sarbanes-Oxley or any other legislation, compliance is mandatory and strictly monitored. Non-compliance can bring about lawsuits, fines and even jail time for corporate executives. So, how can organizations become compliant and minimize their risk of penalties?

Companies can leverage technology solutions that help automate the capture and archiving of vital corporate information and enhance security. But, they must also establish internal audit and controls. By identifying and creating internal controls and continually monitoring compliance, companies can greatly reduce the opportunity for fraud.

No organization can eliminate risk entirely. However with the proper controls, threats to the IT environment, infrastructure or data will be immediately identified and targeted for correction and compliance.

Courts or regulatory bodies specifically look for the following:

- A formal policy for record retention
- A policy that has been communicated throughout the organization
- Employee training
- Auditing steps to ensure compliance and correct problems or policy breaches
- A consistently enforced policy
- An authentic and complete archive
- Precautions taken to ensure security and privacy

Establishing compliance is critical, but so too is ongoing auditing to ensure your organization continues to meet all requirements. How can you develop the auditing procedures necessary? Where do you start? Turn to the experts at G Force.

UNISYS

A comprehensive compliance solution.

G Force Global Technologies is a services and technology company. We help organizations tackle the key issues of corporate governance—from security to segregation of duties—and provide the tools and processes needed for compliance. Plus, with our proven methodology, we guide them every step of the way.

Today, every organization faces software compliance issues. Software vendors are keeping a vigilant eye on how their products are being used—or misused. It has never been more important to ensure that your software licensing is being handled properly. G Force has helped numerous companies more efficiently and thoroughly address this area.

G Force, along with Verifichi, Unisys and EMC, can provide the processes, tools and consulting services needed to help IT organizations assess their risk and establish a roadmap to compliance success.

Verifichi.

IT Verify from Verifichi allows corporations to simplify the crucial tasks associated with compliance by managing the underlying complexity of their network and system infrastructure through change surveillance. This software solution notifies the administrator of any changes to the infrastructure, including the addition or deletion of hardware and/or software licenses. As a result, IT staff can more rapidly detect and react to unauthorized changes, increasing their efficiency, while adhering to any compliance mandates.

EMC Corporation.

In business today, e-mail is the number one method of communication. However, it is extremely difficult to implement internal controls for record keeping for both e-mail and IM. Difficult as it may be, it is legally required. In fact, destroying, concealing or falsifying internal communications can lead to stiff penalties, including jail time. Therefore, the ability to guarantee the origin, integrity and validity of e-mail and IM communications is vital. Governing bodies and auditors are looking for demonstrated chains of custody, the ability to preserve that chain for evidence purposes, instituted controls for retention for specific periods of time and reasonably fast and easy retrieval. Considering the volume of e-mails companies generate, this is no easy task. And once again, IT is on the line for a solution.

EMC Centera is a storage solution designed for long-term online archiving of fixed content data. The world's first Content Addressed Storage (CAS) system, Centera provides online access to fixed content data, such as e-mail and instant messages, while preserving the authenticity of data. All at a better total cost of ownership than with tape.

Unisys.

With the ES7000 Family of Servers from Unisys, organizations can leverage enterprise-level power and functionality to deploy compliance solutions in a streamlined server environment. Inspired by mainframe designs, ES7000 servers deliver the highest levels of availability, manageability and performance for Microsoft operating environments. With a deep understanding of both mainframe and server environments, Unisys consultants have the knowledgebase and skill sets needed to assist organizations with compliance in all areas of the business.

Get on the road to compliance.

Regulatory compliance is a must in today's business environment. Creating a long-term strategy and identifying the tools and processes that are right for your organization is a big challenge. Get started today with G Force Global Technologies.
